
test-app

- ✓ *Creation of the application.*
 - ✓ *Serve the application.*
 - ✓ *Open the application.*
-

1. Create a folder for your angular applications.

```
cmd
> cd C:\
> mkdir angularProjects
```

2. Open code editor.

3. Open the folder you just created.

[Ctrl – K Ctrl – O]

4. Open the CLI (it may be already open).

[Ctrl – ñ] or from the view menu

5. Create the application.

Make sure you are in the folder you just created.

```
CLI
> ng new test-app (it may take a while)
```

6. Serve the application.

```
CLI
> cd test-app
> ng serve --open (ng serve -o, ng serve)
```

Check for the generated bundles.

Troubleshooting.

Error message: node_modules appears empty.

Why: not in the app directory.

Solution: cd to the app directory.

7. Open the application and view the source.

view-source:http://localhost:4200/

8. Stop the application.

[Ctrl – c]
